

IL1B

Recombinant Human Interleukin-1 beta

Catalog No.	CRI133A	Quantity:	2 µg
	CRI133B		10 µg
	CRI133C		1.0mg

Alternate Names: IL-1, Catabolin, IL-1 Beta, IL1F2

Description: Interleukin-1 beta (IL1β) is produced, mainly by activated macrophages, as a proprotein which is proteolytically processed to its active form by caspase 1. This cytokine is an important mediator of the inflammatory response, and is involved in a variety of cellular activities, including cell proliferation, differentiation, and apoptosis. Both IL-1 alpha and IL-1 beta bind to the same receptor and have similar but not identical biological properties.

Recombinant Human IL-1 beta is a single non-glycosylated polypeptide chain containing 154 amino acids.
