

Rabbit Anti-Conjugated Adrenaline pAb

Catalog No.	PA2007	Quantity:	100 µl
Description:	Rabbit Anti-Conjugated Adrenaline pAb consists of 10.0 mg total IgG and 0.1 mg antigen specific IgG.		
Concentration:	1.0 mg/ml of antigen specific IgG after reconstitution		
Purity:	Antiserum previously preadsorbed on protein carriers and purified.		
Specificity:	Using a conjugate Adrenaline-Glutaraldehyde-Protein, antibody specificity was performed with an ELISA test by competition experiments with the following compounds: Adrenaline-G-(Pc), Cross-reactivity ratio of 1 Noradrenaline-G-(Pc), Cross-reactivity ratio of 1:140 Dopamine-G-(Pc), Cross-reactivity ratio of 1:170		
Host:	Rabbit		
Immunogen:	Synthetic adrenaline conjugated to protein carrier (Pc)		
Isotype:	IgG		
Formulation:	Lyophilized		
Purification:	IgGs were purified from antiserum that had been pre-absorbed against BSA.		
Reconstitution:	Centrifuge vial prior to opening. It is critical to use the following sequence when reconstituting this antibody: dissolve antibody in 50 µl sterile distilled water, then add 50 µl glycerol.		
Applications:	ELISA: working dilution of 1:1,000 - 1:5,000. Immunocytochemistry: working dilution of 1:1,000 - 1:5,000. Western Blot: working dilution of 1:1,000 - 1:2,000. The optimal concentration should be determined by the user for each specific application.		
Storage & Stability:	Store lyophilized antibody at 2-4°C. Reconstituted antibody is stable for at least 2 years in working aliquots at -20°C. Avoid repeated freeze-thaw cycles.		
Research Areas:	Neurobiology, pharmacology, cardiovascular research and degenerative diseases.		
Also available:	Corresponding Antigen: Catalog No. AG035: Adrenaline conjugate, 1 mg		

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
