## Human Anti-SARS-CoV-2 Spike-RBD Bamlanivimab (Clone LY-CoV555) Neutralizing mAb

Catalog No. CPC534A Quantity: 50 μg

CPC534B 100 μg

Alternate Names: Spike glycoprotein, S glycoprotein receptor binding domain, S-RBD

**Description:** Recombinant Human anti-SARS-CoV-2 Spike Protein Receptor Binding Domain,

Bamlanivimab Clone LY-CoV555, is expressed in XtenCHO.

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is an enveloped, positive-sense, single-stranded RNA virus that causes coronavirus disease 2019 (COVID -19). The structural proteins of SARS-CoV-2 include the envelope protein (E), spike or surface glycoprotein (S), membrane protein (M) and the nucleocapsid protein (N). The spike glycoprotein is found on the outside of the virus particle and gives coronavirus viruses their crown-like appearance. Spike glycoprotein is cleaved into the following 3 chains, Spike protein S1, Spike protein S2, Spike protein S2'. Spike protein S1 attaches the virion to the cell membrane by interacting with host receptor, initiating the infection. Binding to human ACE2 receptor and internalization of the virus into the endosomes of the host cell induces conformational changes in the Spike glycoprotein. Surface glycoprotein is an important target for vaccine development, antibody therapies and

diagnostic antigen-based tests.

UniProt ID: P0DTC2

Immunogen:Recombinant SARS-CoV-2 Spike-RBD proteinSpecificity:Recognizes SARS-CoV-2 Spike-RBD protein

Source: XtenCHO

**Purity:** > 95% by reduced and non-reduced SDS-PAGE

**Isotype:** Human IgG

Clone: LY-CoV555 (Bamlanivimab )

**Concentration:** 1.0 mg/ml, lot specific

**Formulation:** Sterile-filtered PBS, pH 7.5 preservative free.

**Purification:** Protein A affinity chromatography

Applications: Neutralization, Functional Assays

**ELISA** 

Western blot

Stable at 2-8°C for 1 week or for up to 1 year at -20°C to -80°C. It is recommended to
