ELISA plate was coated with purified mouse IgG, IgM, and IgA. Immunoglobulins were detected with serially diluted Goat Anti-Mouse IgG, Human ads-HRP.

Total cell lysates from NIH/3T3 cells were resolved by electrophoresis, transferred to PVDF membrane, and probed with Mouse Anti-Bax. Proteins were visualized using Goat Anti-Mouse IgG HRP secondary antibody and chemiluminescent detection.

Purified human IgG was resolved by electrophoresis, transferred to PVDF membrane, and visualized using Mouse Anti-Human IgG Fc followed by Goat Anti-Mouse IgG (Ads) HRP secondary antibody and chemiluminescent detection.
