Immunofluorescence on cultured cells. LEFT: untransfected control; RIGHT: HEK293 cells transfected with His-tagged fusion protein. Both stained with anti-HIS (in red), counterstained with DAPI (in blue)

Comparison between anti-His tag (HIS.H8 / EH158) mAb with 2 different vendor Abs, probed against a standard ladder containing five different His-tagged proteins. All Ab dilutions are 1:2,000 (0.5 µg/mL)

Standard ladder containing five different His-tagged proteins; untransfected control (1), HEK293 cells transfected with His-tagged protein vector (2)
